Message from the Chairman

Capital markets drive corporate transformation and social progress. Because Taiwan holds a vital position in the global supply chain, local companies face unique challenges in reducing emissions. As a financial pillar, TPEx helps businesses transition to low-carbon models, leading capital markets into a new era of net-zero emissions through strengthened ESG disclosures and corporate social responsibility.

To support sustainability, we upgraded our digital platforms to make information sharing more efficient. Our enhanced IFRS section helps listed companies find regulatory data faster, while our upgraded ESG platform streamlines report submission. To augment strategic decision-making, we introduced green certifications and integrated climate risk management directly into corporate evaluations.

Green finance remains the backbone of corporate transformation. TPEx continues to expand our sustainable bond market to attract international investment. According to the World Federation of Exchanges (WFE), TPEx ranked second in the Asia-Pacific region and sixth globally for sustainable bond issuance in 2025. This success includes a record-high NT$16.1 billion issued by government agencies for public infrastructure, alongside expanded ESG indices for diverse investor choices.

We also practice what we preach. In 2025, TPEx achieved organizational carbon neutrality for the 2024 operating year, verified under the international BSI ISO 14068-1 standard. Internally, we foster a diverse, inclusive, and professional workplace. Externally, we invest in five key areas: disadvantaged groups, healthcare, culture, sports, and environmental protection.

Having been awarded with the 2025 National Sustainable Development Award, TPEx moves forward in its mission to further embrace greater gender and educational equity, alongside raising public awareness of sustainability. The goal deepens to continuously inject sustainable momentum into Taiwan's capital market to foster the harmonious development of the economy and the environment.

Chairman
